John Nnamani

Software Engineer.

Enugu. Nigeria
(+234) 810 158 4839
nnamanikester@gmail.com

SUMMARY

I'm a Software Engineer who is keen on problem-solving. I have most of my strength in converting UI designs from pixel-to-pixel to actual mobile apps and enhancing user experience.

Despite the fact that I enjoy working solo, I've found working with teams equally rewarding because I feel it's one of the most effective ways to harness human resources. I'm looking for projects that are challenging enough if completed would be considered magical.

EXPERIENCE

Maharishi Foundation International (MFI), Lowa, United States — *Mobile App QA Engineer*

November 2021 - June 2022 (8 months).

(COMPANY)

Maharishi Foundation International (MFI) is a US public charity that has at its core a fully remote team of approximately 50 people. MFI is committed to leveraging modern technology and progressive management practices to make the TM technique and its related programmes more available to people everywhere.

My role as a QA Engineer at MFI was to lead the QA team and write automated testing using jest and Detox to test the TM app built with react native so as to eliminate the manual method of testing the TM app. I also compile and run the test both on the local machine and CI/CD environment.

I was able to work with Bitrise and Circle CI where I ran the automated tests before starting the build process. In case the test fails, the build won't proceed.

I learnt better how to work in a remote team of people at different timezone. Communication and teamwork was the only way we could get the job done.

I also learnt to work in an Agile team in which MFI makes use of SCRUM methodology in product development collaboration. We made use of Jira for task management, Zoom for weekly standups and Slack bot(Alice) for daily standups.

AREA OF EXPERTISE

- Conversion of UI files to actual apps.
- Designing web apps that are responsive across all screen sizes.
- REST and GraphQL API consumption.
- Creating nice animations and enhancing user experience.

Destreetboard, Enugu, Nigeria — *(Co-Founder/Software Engineer)*

February 2020 - Present.

(**COMPANY**)

Destreetboard is a software development startup which I co-founded.

I built the **Shopking** android application using react-native. Shopking is a shopping service app that helps its customers to purchase personalised items within their local markets places and get them delivered to their doorstep.
I got to familiarise myself with collecting payments on react native using Paystack react-native API.

I led a team of developers in building Kaizen Academy for a client – a learning platform that provides courses on skill acquisition.
I got to understand how difficult leading a team of developers is, but I was able to manage them properly and I made sure everyone was doing his part of the job diligently.
I got to learn more about working with git and GitHub in collaborating with other developers.

I also led a team of developers in building Rodicash – a platform that enhances the process of cardless withdrawal through Rodicash Merchants.
I got to familiarise myself with designing better react native apps and working with components properly. I created my own components which enables me to customize the feel of the mobile app exactly the way it was designed by the designer.
I familiarised myself with e2e testing using Jest and Detox in react native.

Evian Bliss Hair Spa, Enugu, Nigeria — *Front End Engineer.*

July 2022.

(**PROJECT**)

Evian Bliss Hair Spa is a natural hair spa in Enugu, Nigeria for hair treatments and protective styling, grooming and consultations.

I built the **evianbliss.com** website using NextJS and deployed it on Vercel platform. This is currently the website I'm most proud of as a front-end engineer, yet to build more amazing projects.

In building this website, I utilized tools like NextJS, React, SCSS, etc. I also implemented an online booking system which make to project more amazing. I used MongoDB in storing data which is collected from the website. SEO is one of the things I paid more attention to while building the website and I can firmly say that the website is very SEO friendly.

Shopking, Enugu, Nigeria — *Front End Engineer*

December 2020 - May 2022 (1 year, 5 months).

(PROJECT)

Shopking is an online errand platform that helps its users to focus on important things that matters while They do their shopping /errands.

I built and deployed the shopking Web and Mobile application which helped me gain experience in deploying mobile apps in the App Store and Playstore and also deploying websites in Vercel with a custom domain name.

I made sure the design matches that of the Figma UI pixel-to-pixel which is one of my greatest strengths as a front-end engineer.

I utilized tools like NextJS, React, SCSS etc in website development and tools like React Native, Redux, Expo EAS, etc in mobile app development.

SooleRide Limited, Ibadan, Nigeria — *React Native Developer.*

SEPTEMBER 2020 - FEBRUARY 2021 (5 months).

(COMPANY)

SooleRides is a platform that conveniently links riders and drivers going to the same city at rates that everyone can afford.

I rebuilt the Soolerides mobile app using react native to implement the new UI design changes by the UI/UX designer and also add features like group and private trips. I also added Google Maps navigating features to enable users to track their location in real-time.

I got to familiarise myself with working with google maps API in react native and how it truly works. I worked with the *react-native location* API to enable me to subscribe to the device GPS to get the users' coordinates which I would feed the google maps API with as props to show the user's real-time location.

Solerides became the first react native mobile app which I personally launched on the app store and google play store. This helps me to understand how publishing apps on the store works. Although it was not easy to wrap my head around the whole process, I got to learn how it works exactly and it will make it easier for me while publish future mobile apps.

TECHNICAL SKILLS

TypeScript · JavaScript · React · Redux · NextJs · HTML · CSS · SCSS · Jest · NodeJs · React Native · MongoDB · MySQL · GraphQL · Apollo · REST · Bootstrap · Tailwind · JQuery · Git/Github · CirclCI · SEO · Detox · Laravel · PHP
